

Man finder volumen under en 3D-graf

$$V = \text{fl\u00e5deintegral af } z = f$$

$$z = f(x, y)$$

$$V = \iint f \, dx \, dy$$

$$\begin{aligned} V &= \iint_R f(x, y) \, dy \, dx \\ &= \int_c^d \underbrace{\left(\int_a^b f(x, y) \, dx \right)}_{h(y)} \, dy \end{aligned}$$

$h(y)$

$$\int_c^d \int_a^b f(x, y) dx dy = \int_a^b \int_c^d f(x, y) dy dx$$

Push at byte

$$\iint_R f(x, y) dy dx = \int_a^b \int_{g(x)}^{h(x)} f(x, y) dy dx$$
