

Trisse med masse og friktion

Friday, 8 December 2023

14.44

Hvile

$$\alpha = 0, \tau_p = 0$$

vi vælger denne retning som positiv

$$\tau_p = RT_2 - RT_1 = 0$$

$$T_1 = T_2$$

Bevægelse

$$\text{lod 1} \uparrow T_1 - m_1 g = m_1 a$$

$$\text{lod 2} \downarrow m_2 g - T_2 = m_2 a$$

$$\begin{aligned} \text{trisse} \curvearrowright RT_2 - RT_1 &= I_{cm} \alpha \\ &= I_{cm} \frac{a}{R} \end{aligned}$$

3 ligninger 3 ubekendte
(se bog evt.)

$$a = \frac{m_2 - m_1}{\frac{I}{R^2} + m_1 + m_2} g$$

$$T_1 \neq T_2$$

Friction vil sige
at trissen følger
snoren, ikke noget
man regner på
